

融合终端覆盖率

1、概述

展示配变是否有相应融合终端的情况

2、算法

融合终端覆盖率=能关联到融合终端的配变/总配变数

3、查询

1、从 redis 中查询融合终端和配变的关系，半小时更新一次

```
select a.ID , c.ORGID, a.DEV_NAME as TTUNAME, fe.name as fename, b.name as
trname, b.id as trid from d5000.dms_tr_device b
    left join d5000.iot_device a on a.RELY_ID = b.ID and
a.connect_mode = 1 and a.is_valid = 1 and a.run_state = 1
    left join d5000.dms_feeder_device fe on fe.id = b.feeder_ID
    left join osp.device_auth_manage c on fe.ID = c.DEVICEID
where 1=1 and c.ORGID is not null
```
