融合终端覆盖率

数据表

相关字段	
iot_device iot 设备表	
rely_type	Iot 业务类型(3,配网变压器)
rely_id	关联设备 id
connect_mode	接入方式
Dms_tr_device 配网配变表	
Id	配变 id

3.9.2 逻辑

3.9.2.1 计算公式

融合终端安装进度=已挂接配变数量/配变总数量

已挂接配变数量 sql：**select** a.ID , c.ORGID **from** d5000.iot_device a
left join d5000.dms_tr_device b **on** a.RELY_ID = b.ID
left join osp.device_auth_manage c **on** b.FEEDER_ID = c.DEVICEID
where a.connect_mode = 1 **and** a.is_valid = 1 **and** a.run_state = 1
and c.ORGID **in** (**select** id **from** osp.isc_baseorg g **start with** id='338a888e74566fda017456cab8e40012' **connect by prior** g.id=g.parent_id)

配变总数量：**select** b.ORGID **from** d5000.dms_tr_device a
left join osp.device_auth_manage b **on** a.feeder_id = b.deviceid
and b.ORGID **in** (**select** id **from** osp.isc_baseorg g **start with** id='338a888e74566fda017456cab8e40012' **connect by prior** g.id=g.parent_id)
